

KDEF

PLUS Korea Defense Industry Index ETF

The PLUS Korea Defense Industry Index ETF (**KDEF**) seeks to provide investment results that correspond generally to the total return performance of the Korea Defense Industry Index, before fees and expenses. The index is designed to track the performance of South Korean companies that have demonstrated high relevance to defense.

Why KDEF?

1. Trump 2.0: The Arms Race Intensify

- Rising geopolitical risks highlight the importance of national defense
- **Trump's return accelerates "America First" policies, boosting global defense spending**
- Trump is pushing NATO members to raise defense spending to 5% of GDP, and conservatively, an increase to 3%–3.5% seems inevitable¹⁾

2. K-Defense Expands to the U.S. Market

- Hanwha Aerospace's 'K9 SPH', LIG Nex1's 'Poniard', etc.²⁾
- Continued orders from the U.S. Navy MRO Project

3. Outlook Remains Strong for 2025

- **Export projects account for over 60% of order backlog of K-Defense companies³⁾**
- Strong momentum driven by accumulating orders and growth in profit

Market Price	3.25%	45.59%	TBD	105.35%	105.35%	TBD	TBD	TBD

Inception Date: Feb 5, 2025
The performance data quoted represents past performance. Past performance does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the original cost. Returns for periods of less than one year are not annualized. Performance data for the most recent month-end is available above. The market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share, and do not represent the returns you would receive if you traded shares at other times. NAVs are calculated using prices as of 4:00 PM Eastern Time.

Risk Disclosure and Important Information

Carefully consider the Fund's investment objectives, risk factors, charges and expenses before investing. This and additional information can be found on the Fund's full or summary prospectus, which may be obtained at www.plusetf.com. Read the prospectus carefully before investing.

Investing involves risk, including possible loss of principal. There is no guarantee the Fund will achieve their stated objectives. In addition to the normal risks associated with investing, international investments may involve the risk of capital loss from unfavorable fluctuation in currency values, differences in generally accepted accounting principles or social, economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume. The Fund's concentration in an industry or sector can increase the impact of, and potential losses associated with, the risks from investing in those industries/sectors.

The Fund's concentration in a single country or a limited number of countries will increase the impact of, and potential losses associated with, the risks from investing in those countries.

The Fund is non-diversified. The Fund is new and has a limited operating history for investors to evaluate. A new and smaller fund may not attract sufficient assets to achieve investment and trading efficiencies. In addition to the normal risks associated with investing, investments in smaller companies typically exhibit higher volatility.

The Fund may invest in securities denominated in foreign currencies. Because the Fund's NAV is determined in U.S. dollars, the Fund's NAV could decline if currencies of the underlying securities depreciate against the U.S. dollar or if there are delays or limits on repatriation of such currencies. Currency exchange rates can be very volatile and can change quickly and unpredictably.

The Fund is a recently organized investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision. Moreover, investors will not be able to evaluate the Fund against one or more comparable funds on the basis of relative performance until the Funds has established a track record.

The Fund invests in securities denominated in South Korean won. Investments denominated in non-U.S. currencies and investments in securities or derivatives that provide exposure to such currencies, currency exchange rates or interest rates are subject to non-U.S. currency risk. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund's investment and the value of your Fund shares. Because the Fund's net asset value is determined on the basis of U.S. dollars, the U.S. dollar value of your investment in the Fund may go down if the value of the local currency of the non-U.S. markets in which the Fund invests depreciates against the U.S. dollar. This is true even if the local currency value of securities in the Fund's holdings goes up. Conversely, the U.S. dollar value of your investment in the Fund may go up if the value of the local currency appreciates against the U.S. dollar.
