

EXCHANGE LISTED FUNDS TRUST

**ETC Cabana Target Leading Sector Moderate ETF
(formerly, Cabana Target Leading Sector Moderate ETF)**

Summary Prospectus | August 28, 2025

Principal Listing Exchange for the Funds: Nasdaq Stock Market LLC | (Ticker Symbol: CLSM)

Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. You can find the Fund's prospectus, reports to shareholders, and other information about the Fund online at www.cabanaetfs.com. You can also get this information at no cost by calling (866) 239-9536, by sending an e-mail request to info@exchangetradedconcepts.com or by asking any financial intermediary that offers shares of the Fund. The Fund's [prospectus and statement of additional information](#), each dated August 28, 2025, as each may be amended or supplemented from time to time, are incorporated by reference into this summary prospectus and may be obtained, free of charge, at the website, phone number or email address noted above.

Investment Objective

The ETC Cabana Target Leading Sector Moderate ETF (the “Fund”) seeks to provide long-term growth.

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fee	0.80%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses	0.00%
Acquired Fund Fees and Expenses ¹	0.13%
Total Annual Fund Operating Expenses	0.93%
Fee Waiver/Expense Reimbursement ²	-0.11%
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	0.82%

¹ Total Annual Fund Operating Expenses and Total Annual Fund Operating Expenses After Waiver/Reimbursement in this fee table do not correlate to the expense ratios in the Fund’s financial highlights because the financial highlights reflect only the operating expenses of the Fund and do not include Acquired Fund Fees and Expenses, which are fees and expenses incurred indirectly by the Fund through its investments in certain underlying investment companies.

² Effective January 8, 2024, Exchange Traded Concepts, LLC (the “Adviser”) has contractually agreed to waive its fees and reimburse expenses to the extent necessary to keep total annual operating expenses of the Fund (excluding amounts payable pursuant to any plan adopted in accordance with Rule 12b-1, interest expense, taxes, acquired fund fees and expenses, brokerage commissions, other expenditures which are capitalized in accordance with generally accepted accounting principles, and extraordinary expenses) from exceeding 0.69% of the combined average daily net assets of the Fund and related funds up to and including \$750 million, and 0.64% of combined average daily net assets in excess of \$750 million through at least August 31, 2026, unless earlier terminated by the Board of Trustees (the “Board”) of Exchange Listed Funds Trust (the “Trust”) for any reason at any time or by the Adviser for any reason upon thirty days’ prior notice to the Trust, such termination to be effective upon the expiration of the then-current term.

³ Reflects current expenses and therefore, does not correlate to the Fund’s financial highlights.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same (including one year of capped expenses each period). Although your actual costs may be higher or lower, based on these assumptions your cost would be:

1 Year	3 Years	5 Years	10 Years
\$84	\$285	\$504	\$1,133

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when shares of the Fund are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example above, affect the Fund’s performance. For the fiscal year ended April 30, 2025, the Fund’s portfolio turnover rate was 401% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective primarily by allocating its assets among ETFs that invest in securities of companies in the various sectors of the U.S. market: communication services, consumer discretionary, consumer staples, energy, financials, health care, industrials, information technology, materials, real estate, and utilities. The Fund’s sub-adviser, Cabana Asset Management (the “Sub-Adviser”), selects investments in sectors of the market it identifies as attractive pursuant to an asset allocation strategy designed to optimize performance while seeking to manage portfolio volatility and reduce exposure to down markets.

The Fund operates in a manner that is commonly referred to as a “fund of funds,” meaning that it primarily invests in other ETFs. The ETFs may invest in any of the five major asset classes – equities, fixed income, real estate, currencies, and commodities. The ETFs may invest in a broad range of securities including equity securities of any market capitalization and fixed income securities of any duration, maturity, and quality (including high yield or non-investment grade securities, commonly referred to as “junk bonds,” and U.S. government securities). The ETFs may invest in securities of U.S. and foreign issuers, including emerging markets issuers. In addition, the Fund may invest directly in securities and other instruments to obtain the desired exposure to a specific sector.

To implement its strategy, the Sub-Adviser utilizes its Cyclical Asset Reallocation Algorithm (“CARA”), a proprietary algorithm developed by the Sub-Adviser that monitors market conditions to identify sectors that are particularly attractive at any given time in the business cycle. CARA incorporates various fundamental economic and technical price data, including public information concerning the yield curve (*i.e.*, the spread between short- and long-term interest rates), earnings of a broad spectrum of companies in the U.S. equity market, and equity price trends. CARA also uses this information to identify significant market deteriorations and provide corresponding signals, when appropriate, to move to a more conservative allocation (*e.g.*, short term treasuries). The Sub-Adviser, through CARA, monitors the Fund’s investments daily and allocates or reallocates the Fund’s assets across sectors as well as across less-correlated and inversely-correlated asset classes in an effort to reduce exposure to potential market declines. In allocating the Fund’s assets, the Sub-Adviser expects to utilize a moderate investment style, meaning that the Sub-Adviser will seek a balance between capital preservation and growth through allocation to sectors that are believed to outperform at various points within the economic cycle. The Sub-Adviser’s use of less-correlated and inversely-correlated asset classes is intended to manage the Fund’s volatility consistent with this investment style.

Although the Sub-Adviser anticipates that it will purchase or sell securities based on the signals provided by CARA, the Sub-Adviser maintains full decision-making power and may override CARA if it determines that a breakdown or systemic change has occurred in the methods for which capital is deployed within the worldwide economic system or if it believes that CARA does not signal appropriate changes to risk assets as the economic cycle evolves. The Sub-Adviser expects the Fund, during normal market conditions, to be fully invested at all times.

Principal Risks

As with all funds, a shareholder is subject to the risk that his or her investment could lose money. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any government agency. The principal risks affecting shareholders' investments in the Fund, either directly or through its investments in an ETF, are set forth below. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears.

Cybersecurity Risk. The Fund is susceptible to operational risks through breaches in cybersecurity. A breach in cybersecurity refers to both intentional and unintentional events that may cause the Fund to lose proprietary information, suffer data corruption or lose operational capacity. Such events could cause the Fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss. Cybersecurity breaches may involve unauthorized access to the Fund's digital information systems through "hacking" or malicious software coding but may also result from outside attacks such as denial-of-service attacks through efforts to make network services unavailable to intended users. In addition, cybersecurity breaches of the issuers of securities in which the Fund invests or the Fund's third-party service providers, such as its administrator, transfer agent, custodian, or sub-adviser, as applicable, can also subject the Fund to many of the same risks associated with direct cybersecurity breaches. Although the Fund has established risk management systems designed to reduce the risks associated with cybersecurity, there is no guarantee that such efforts will succeed, especially because the Fund does not directly control the cybersecurity systems of issuers or third-party service providers.

Exchange-Traded Funds Risk. Through its investments in ETFs, the Fund is subject to the risks associated with the ETFs' investments, including the possibility that the value of the instruments held by an ETF could decrease. These risks include any combination of the risks described below, as well as certain of the other risks described in this section. The Fund's exposure to a particular risk will be proportionate to the Fund's overall allocation and each ETF's asset allocation. In addition, by investing in the Fund, shareholders indirectly bear fees and expenses charged by the ETFs in addition to the Fund's direct fees and expenses. As a result, the cost of investing in the Fund may exceed the costs of investing directly in ETFs. The Fund may purchase ETFs at prices that exceed the net asset value of their underlying investments and may sell ETF investments at prices below such net asset value, and will likely incur brokerage costs when it purchases and sells ETFs.

Commodity Investing Risk. An ETF's investment in commodity-related companies may subject the ETF to greater volatility than investments in traditional securities. The commodities markets have experienced periods of extreme volatility. Similar future market conditions may result in rapid and substantial valuation increases or decreases in the ETF's holdings.

Credit Risk. An ETF could lose money if the issuer or guarantor of a debt instrument in which the ETF invests becomes unwilling or unable to make timely principal and/or interest payments, or to otherwise meet its obligations.

Equity Securities Risk. The prices of equity securities in which the ETFs invest may rise and fall daily. These price movements may result from factors affecting individual issuers, industries or the stock market as a whole.

Emerging Markets Securities Risk. Emerging markets are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than more developed markets. In addition, securities in emerging markets may be subject to greater price fluctuations than securities in more developed markets. Differences in regulatory, accounting, auditing, and financial reporting and recordkeeping standards could impede the Sub-Adviser's ability to evaluate local companies and impact the Fund's performance. Investments in securities of issuers in emerging markets may also be exposed to risks related to a lack of liquidity, greater potential for market manipulation, issuers' limited reliable access to capital, and foreign investment structures. Additionally, the Fund may have limited rights and remedies available to it to pursue claims against issuers in emerging markets.

Fixed Income Securities Risk. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by an ETF may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

Foreign Securities Risk. Investments in non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. For example, investments in non-U.S. securities may be subject to risk of loss due to foreign currency fluctuations or to expropriation, nationalization or adverse political or economic developments. Foreign securities may have relatively low market liquidity and decreased publicly available information about issuers. Investments in non-U.S. securities also may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. Non-U.S. issuers may also be subject to inconsistent and potentially less stringent accounting, auditing, financial reporting and investor protection standards than U.S. issuers. These and other factors can make investments in an ETF more volatile and potentially less liquid than other types of investments. In addition, where all or a portion of an ETF's portfolio holdings trade in markets that are closed when the ETF's market is open, there may be valuation differences that could lead to differences between the ETF's market price and the value of the ETF's portfolio holdings.

High Yield or Non-Investment Grade Securities Risk. High yield or non-investment grade securities (commonly referred to as “junk bonds”) and unrated securities of comparable credit quality are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations and are generally considered to be speculative. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the non-investment grade securities markets generally, real or perceived adverse economic and competitive industry conditions and less secondary market liquidity. If the issuer of non-investment grade securities defaults, an ETF may incur additional expenses to seek recovery.

Issuer-Specific Risk. Fund performance depends on the performance of the individual securities to which the ETFs have exposure. Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of an ETF.

Large-Capitalization Company Risk. An ETF’s performance may be adversely affected if securities of large-capitalization companies underperform securities of smaller-capitalization companies or the market as a whole. The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.

Real Estate Investments Risk. Risks related to investments in real estate include declines in the real estate market, decreases in property revenues, increases in interest rates, increases in property taxes and operating expenses, legal and regulatory changes, a lack of credit or capital, defaults by borrowers or tenants, environmental problems and natural disasters.

Sector Focus Risk. An ETF may invest a significant portion of its assets in one or more sectors and thus will be more susceptible to the risks affecting those sectors.

Small and Mid-Capitalization Company Risk. The small- and mid-capitalization companies in which an ETF invests may be more vulnerable to adverse business or economic events than larger, more established companies, and may underperform other segments of the market or the equity market as a whole. Securities of small- and mid-capitalization companies generally trade in lower volumes, are often more vulnerable to market volatility, and are subject to greater and more unpredictable price changes than larger capitalization stocks or the stock market as a whole.

U.S. Government Securities Risk. U.S. government securities are subject to price fluctuations and to default in the event that an agency or instrumentality defaults on an obligation not backed by the full faith and credit of the United States.

Market Risk. The market price of an investment could decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic or political conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of an investment may also decline because of factors that affect a particular industry or industries, such as labor shortages, increased production costs, and competitive conditions. Local, regional, or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the market generally and on specific investments. For example, in recent years, the COVID-19 pandemic, the large expansion of government deficits and debt as a result of government actions to mitigate the effects of the pandemic, Russia's invasion of Ukraine, and the rise of inflation have resulted in extreme volatility in the global economy and in global financial markets. Trade disputes and the imposition of tariffs, along with other matters, may negatively impact the economies of the United States and its trading partners, as well as the financial markets as a whole. Economies and financial markets throughout the world are becoming increasingly interconnected. As a result, whether or not the Fund invests in securities of issuers located in or with significant exposure to countries experiencing economic and financial difficulties, the value and liquidity of the Fund's investments may be negatively affected.

Asset Allocation Risk. The Fund's investment performance depends upon the successful allocation by the Sub-Adviser of the Fund's assets among asset classes. There is no guarantee that the Sub-Adviser's allocation techniques and decisions will produce the desired results.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.

Limited Authorized Participants, Market Makers and Liquidity Providers Risk. Because the Fund is an ETF, only a limited number of institutional investors (known as "Authorized Participants") are authorized to purchase and redeem shares directly from the Fund. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occurs, the risk of which is higher during periods of market stress, shares of the Fund may trade at a material discount to their net asset value ("NAV") per share, possibly face delisting, and may experience wider bid-ask spreads: (i) Authorized Participants exit the business or otherwise become unable to process creation and/or redemption orders and no other Authorized Participants step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Management Risk. The Sub-Adviser continuously evaluates the Fund's holdings, purchases and sales with a view to achieving the Fund's investment objective. However, the achievement of the stated investment objective cannot be guaranteed over short- or long-term market cycles. The Sub-Adviser's judgments about the markets, the economy, or companies may not anticipate actual market movements, economic conditions or company performance, and these judgments may affect the return on your investment. The quantitative model used by the Sub-Adviser may not perform as expected, particularly in volatile markets.

In addition, although the Sub-Adviser seeks to manage volatility within the Fund's portfolio, there is no guarantee that the Sub-Adviser will be successful. Securities in the Fund's portfolio may be subject to price volatility, and the Fund's share price may not be any less volatile than the market as a whole and could be more volatile. The Sub-Adviser's determinations and expectations regarding volatility may be incorrect or inaccurate, which may also adversely affect the Fund's actual volatility. The Fund also may underperform other funds with similar investment objectives and strategies. The Fund may provide protection in volatile markets by potentially curbing or mitigating the risk of loss in declining equity markets, but the Fund's opportunity to achieve returns when the equity markets are rising may also be limited. In general, the greater the protection against downside loss, the lesser the Fund's opportunity to participate in the returns generated by rising equity markets; however, there is no guarantee that the Fund will be successful in protecting the value of its portfolio in down markets.

Model and Data Risk. The Fund relies heavily on CARA, a proprietary model developed by the Sub-Adviser, as well as data and information supplied by third parties that are utilized by such model. To the extent the model does not perform as designed or as intended, the Fund's strategy may not be successfully implemented and the Fund may lose value. If the model or data are incorrect or incomplete, any decisions made in reliance thereon may lead to the inclusion or exclusion of securities that would have been excluded or included had the model or data been correct and complete.

Portfolio Turnover Risk. The Fund's investment strategy may result in relatively high portfolio turnover, which may result in increased transaction costs and may lower Fund performance.

Operational Risk. The Fund and its service providers may experience disruptions that arise from human error, processing and communications errors, counterparty or third-party errors, technology or systems failures, any of which may have an adverse impact on the Fund.

Sector Focus Risk. While the Fund's sector exposure is expected to vary over time, the Fund anticipates that, from time to time, it may be subject to some or all of the risks described below.

Communication Services Sector Risk. Communication services companies are particularly vulnerable to the potential obsolescence of products and services due to technological advancement and the innovation of competitors. Companies in the communication services sector may also be affected by other competitive pressures, such as pricing competition, as well as research and development costs, substantial capital requirements and government regulation. Additionally, fluctuating domestic and international demand, shifting demographics and often unpredictable changes in consumer tastes can drastically affect a communication services company's profitability. While all companies may be susceptible to network security breaches, certain companies in the communication services sector may be particular targets of hacking and potential theft of proprietary or consumer information or disruptions in service, which could have a material adverse effect on their businesses.

Consumer Discretionary Sector Risk. Consumer discretionary companies are companies that provide non-essential goods and services, such as retailers, media companies and consumer services. These companies manufacture products and provide discretionary services directly to the consumer, and the success of these companies is tied closely to the performance of the overall domestic and international economy, interest rates, competition and consumer confidence.

Consumer Staples Sector Risk. Companies in the consumer staples sector are subject to government regulation affecting the permissibility of using various food additives and production methods, which regulations could affect company profitability. Tobacco companies may be adversely affected by the adoption of proposed legislation and/or by litigation. Also, the success of food and soft drinks may be strongly affected by fads, marketing campaigns and other factors affecting supply and demand.

Energy Sector Risk. Issuers in energy-related industries can be significantly affected by fluctuations in energy prices and supply and demand of energy fuels. Markets for various energy-related commodities can have significant volatility, and are subject to control or manipulation by large producers or purchasers. Companies in the energy sector may need to make substantial expenditures, and to incur significant amounts of debt, in order to maintain or expand their reserves. Oil and gas exploration and production can be significantly affected by natural disasters, as well as changes in exchange rates, interest rates, government regulation, world events and economic conditions. These companies may be at risk for environmental damage claims.

Financials Sector Risk. Financial services companies are subject to extensive governmental regulation, which may limit both the amounts and types of loans and other financial commitments they can make, the interest rates and fees they can charge, the scope of their activities, the prices they can charge and the amount of capital they must maintain. Profitability is largely dependent on the availability and cost of capital funds and can fluctuate significantly when interest rates change or due to increased competition. In addition, deterioration of the credit markets generally may cause an adverse impact in a broad range of markets, including U.S. and international credit and interbank money markets generally, thereby affecting a wide range of financial institutions and markets.

Health Care Sector Risk. The health care sector may be affected by government regulations and government healthcare programs, increases or decreases in the cost of medical products and services and product liability claims, among other factors. Many health care companies are heavily dependent on patent protection, and the expiration of a patent may adversely affect their profitability. Health care companies are subject to competitive forces that may result in price discounting, and may be thinly capitalized and susceptible to product obsolescence.

Industrials Sector Risk. The industrials sector can be significantly affected by, among other things, worldwide economy growth, supply and demand for specific products and services and for industrial sector products in general, product obsolescence, rapid technological developments, international political and economic developments, claims for environmental damage or product liability, tax policies, and government regulation.

Information Technology Sector Risk. Information technology companies may be smaller and less experienced companies, with limited product lines, markets or financial resources and fewer experienced management or marketing personnel. Information technology company stocks, especially those which are Internet related, have experienced extreme price and volume fluctuations that are often unrelated to their operating performance. Securities of information technology companies may be subject to greater price volatility than securities of companies in other sectors. These securities may fall in and out of favor with investors rapidly, which may cause sudden selling and dramatically lower market prices.

Materials Sector Risk. Companies in the materials sector could be affected by, among other things, commodity prices, government regulation, inflation expectations, resource availability, and economic cycles.

Real Estate Sector Risk. An investment in a real property company may be subject to risks similar to those associated with direct ownership of real estate, including, by way of example, the possibility of declines in the value of real estate, losses from casualty or condemnation, and changes in local and general economic conditions, supply and demand, interest rates, environmental liability, zoning laws, regulatory limitations on rents, property taxes, and operating expenses. Some real property companies have limited diversification because they invest in a limited number of properties, a narrow geographic area, or a single type of property.

Utilities Sector Risk. Utility companies are affected by supply and demand, operating costs, government regulation, environmental factors, liabilities for environmental damage and general civil liabilities, and rate caps or rate changes. Although rate changes of a regulated utility usually fluctuate in approximate correlation with financing costs, due to political and regulatory factors rate changes ordinarily occur only following a delay after the changes in financing costs. This factor will tend to favorably affect a regulated utility company's earnings and dividends in times of decreasing costs, but conversely, will tend to adversely affect earnings and dividends when costs are rising. The value of regulated utility equity securities may tend to have an inverse relationship to the movement of interest rates. Certain utility companies have experienced full or partial deregulation in recent years. These utility companies are frequently more similar to industrial companies in that they are subject to greater competition and have been permitted by regulators to diversify outside of their original geographic regions and their traditional lines of business. These opportunities may permit certain utility companies to earn more than their traditional regulated rates of return. Some companies, however, may be forced to defend their core business and may be less profitable. In addition, natural disasters, terrorist attacks, government intervention or other factors may render a utility company's equipment unusable or obsolete and negatively impact profitability.

Tax Risk. In order to qualify for the favorable U.S. federal income tax treatment accorded to a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended, the Fund must, among other requirements, derive at least 90% of its gross income in each taxable year from certain categories of income (“qualifying income”). Certain of the Fund’s commodity-related investments will not generate income that is qualifying income. If the Fund were to fail to meet the qualifying income test and fail to qualify as a RIC, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income. The failure by the Fund to qualify as a RIC could negatively affect a shareholder’s return on its investment in the Fund. Under certain circumstances, the Fund may be able to cure a failure to meet the qualifying income test if such failure was due to reasonable cause and not willful neglect, but in order to do so the Fund may incur significant fund-level taxes, which would effectively reduce (and could eliminate) the Fund’s returns. To the extent the Fund invests in an underlying fund that is taxable as a RIC and that directly makes certain commodity-related investments, the tax rules related to such investments and associated risks described above with respect to the Fund will also apply to the underlying fund that makes such commodity-related investments.

Trading Risk. Shares of the Fund may trade on the Nasdaq Stock Market LLC (the “Exchange”) above (premium) or below (discount) their NAV. The NAV of shares of the Fund will fluctuate with changes in the market value of the Fund’s holdings. The market prices of the Fund’s shares will fluctuate continuously throughout trading hours based on market supply and demand and may deviate significantly from the value of the Fund’s holdings, particularly in times of market stress, with the result that investors may pay more or receive less than the underlying value of the Fund shares bought or sold. When buying or selling shares in the secondary market, you may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask), which is known as the bid-ask spread. In addition, although the Fund’s shares are currently listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained. Trading in Fund shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares of the Fund inadvisable. In stressed market conditions, the market for the Fund’s shares may become less liquid in response to deteriorating liquidity in the markets for the Fund’s underlying portfolio holdings. In such a circumstance, the Fund’s shares could trade at a premium or discount to their NAV.

Performance Information

The following bar chart and table provide some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns for certain time periods compare with the average annual total returns of the S&P 500® Index, the Fund’s primary broad-based securities market index, and the Morningstar Moderate Target Risk Index, which more closely represents the exposure sought by the Fund. All returns assume reinvestment of dividends and distributions. The Fund’s past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Updated performance information is available at www.cabanaetfs.com or by calling 866-239-9536.

* The performance information shown above is based on a calendar year. The Fund’s year-to-date return as of June 30, 2025 was 6.29%.

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

	Return	Quarter/Year
Highest Return	6.34%	Q4/2023
Lowest Return	-12.23%	Q1/2022

Average Annual Total Returns for the Periods Ended December 31, 2024

ETC Cabana Target Leading Sector Moderate ETF	1 Year	Since Inception (7/13/21)
Return Before Taxes	1.92%	-3.56%
Return After Taxes on Distributions	1.34%	-4.30%
Return After Taxes on Distributions and Sale of Fund Shares	1.42%	-2.87%
S&P 500 [®] Index (reflects no deduction for fees, expenses, or taxes)	25.02%	10.51%
Morningstar Moderate Target Risk Index (reflects no deduction for fees, expenses, or taxes)	8.27%	1.87%

After-tax returns are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. In some cases, the return after taxes may exceed the return before taxes due to an assumed tax benefit from any losses on a sale of shares of the Fund at the end of the measurement period.

Investment Advisers

Exchange Traded Concepts, LLC serves as the investment adviser to the Fund. Cabana LLC d/b/a Cabana Asset Management serves as the sub-adviser to the Fund.

Portfolio Managers

G. Chadd Mason, CEO of the Sub-Adviser, has served as a portfolio manager of the Fund since its inception in 2021.

Andrew Serowik, Portfolio Manager of the Adviser, has served as a portfolio manager of the Fund since its inception in 2021.

Gabriel Tan, Portfolio Manager of the Adviser, has served as a portfolio manager of the Fund since its inception in 2021.

Todd Alberico, Portfolio Manager of the Adviser, has served as a portfolio manager of the Fund since its inception in 2021.

Brian Cooper, Portfolio Manager of the Adviser, has served as a portfolio manager of the Fund since 2022.

Purchase and Sale of Fund Shares

The Fund issues shares to, and redeems shares from, certain institutional investors known as “Authorized Participants” (typically market makers or other broker-dealers) only in large blocks of shares known as “Creation Units.” Creation Unit transactions for the Fund are generally conducted in exchange for the deposit or delivery of a portfolio of in-kind securities designated by the Fund and a specified cash payment.

Individual shares of the Fund may only be purchased and sold in the secondary market through a broker or dealer at a market price. The Fund’s shares are listed on the Exchange. You can purchase and sell individual shares of the Fund throughout the trading day like any publicly traded security. The price of the Fund’s shares is based on a market price and, because exchange-traded fund shares trade at market prices rather than NAV, shares may trade at prices greater than NAV (premium) or less than NAV (discount). When buying or selling shares of the Fund in the secondary market, you may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) (the “bid-ask spread”). Recent information regarding the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads is available at www.cabanaetfs.com.

Tax Information

Distributions made by the Fund may be taxable as ordinary income, qualified dividend income, or long-term capital gains, unless you are investing through a tax-advantaged arrangement, such as a 401(k) plan or individual retirement account. In that case, you may be taxed when you take a distribution from such account, depending on the type of account, the circumstances of your distribution, and other factors.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Adviser may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.
